CANNABIS

Tincture

Benefits of Tinctures

Drop-by-Drop Dosing: By allowing you to dispense a single drop or two, tinctures allow you to titrate precisely the right dose. Concentrates, flower and baked goods are generally harder to titrate because they can't be administered drop-by-drop.

Minimum effective dose: Tinctures offer a great way to learn your minimum effective dose (MED), or the smallest amount of cannabis that is effective for managing your condition. We recommend that patients begin with 2.5-5mg of THC, then titrate up drop by drop until you reach your MED, waiting at least 60 minutes between doses.

Discreet sublingual application: By taking tinctures directly under the tongue and holding for 15 seconds, cannabinoids are absorbed directly into the bloodstream through the sublingual artery. This administration method is also preferable for those seeking a discreet way to consume cannabis, without the odor created by smoking or vaping.
