

HAWTHORN BERRY TINCTURE:

Pharmaceutical medicines for heart disease include calcium channel blockers. These work by reducing electrical conduction within the heart. That means that the heart doesn't have to work as hard to pump. Calcium channel blockers also open up the arteries. This makes it easier for the heart to pump blood.

There are some advantages to using hawthorn berry tincture at least in conjunction with a calcium channel blocker. First, the tincture does not interfere with calcium channel blockers. Second, as noted above, it also opens up the blood vessels. Therefore, it, along with medication, may be an effective combination therapy for heart disease.
